

### Accounting & Technical Support For Petroleum Marketers!

One nice feature that many jobbers are missing is the ability to reverse a posted Blend or Rebrand – something that will disassemble the destination product back to its components and restore that FIFO inventory.

If you have this feature, at the Add, Modify, Delete, Inquire line in Rebrand Entry you should see an option for Reversal. Taking that leads to this screen:

This program queries the user with questions designed to locate the posted item we need to reverse. If found, and if the user chooses to proceed, this item will be entered into the current batch under a new type (RV) that is specific for reversals. This new type is visible as such on the journal and posts as a reversal of whatever the original transaction was.

Note that this enhancement is not retroactive. Only when new programs know to track your blends as they are posted will you gain the option to reverse them.

Cost: 1.5 hours.
