

### Accounting & Technical Support For Petroleum Marketers!

We have added a function at 5, 65, 8 called Missing Features. This is mostly for our use; we are trying to organize ourselves here a bit, to let a program scan the files, flags and programs on your system to determine what is installed and what is not. Perhaps you will find it useful as well, to recap what you've installed and what you've declined or just missed.

COMMENT: <RETURN> FOR MORE
COMMAND: -
MESSAGE:
```

The program starts with a prompt for Mode. Mode ALL lists every tracked feature and the status, as shown above. One can also just show only the YES items, or the default, to show only the NO items.

As this is released, a number of systems already have this installed, with 73 items. Others have an early draft installed that we need to update. If you lack it, we'll install it on request.

Cost: none.
